

Financial Security

Weel has been designed from the ground up to keep you safe.

256 bit data encryption

Weel's virtual cards work the same way plastic cards do, the only difference is the virtual cards live on your phone instead of in your wallet.

Continuous fraud prevention

We combine the latest fraud detection technology with Visa's fraud system to analyse user behaviour and immediately block any suspicious activity

Single Sign On (SSO)

Enforce SSO and ensure staff members securely login to Weel through your approved SAML and OIDC identity providers.

PCI-DSS certified providers

Your payment details are tokenised and securely stored with our PCI-DSS certified banking partner.

Zero Liability Protection

You will not be held responsible for unauthorised transactions and we will seek to reverse the transaction under Visa's Zero Liability Protection scheme.

Replace at-risk cards instantly

If you're worried a virtual card has been compromised you can delete it and instantly replace it with a new one.

Secure funds storage

Funds are securely held in trust at an Authorised Deposit Taking Institution (ADI).

Session timeout

Web sessions will automatically timeout to ensure accounts left unattended or stolen devices remain secure.

Step-up auth with biometrics

To protect your identity and secure sensitive parts of your Weel account, we use built-in step-up authentication. Biometric verification, where supported, provides a fast, secure way to confirm it's you.
